

## Junior Wheat Club Crop Adjudicated

The first annual seed fair and judging contest of the Didsbury Junior Wheat Club was held last Thursday afternoon.

The judging was done by Mr. E. C. Hallman, who complimented the boys on their excellent grading and remarked that in spite of the drawbacks of drought and hail, the samples were of a high standard.

Mr. Hallman gave the boys a talk on grading wheat for show purposes, and short talks were also given by Principal Murray and Mr. McPhail of the Olds School of Agriculture, and Mr. W. Pettinger of the Alberta Wheat Pool, who are sponsoring the clubs. Moving pictures illustrating the growing and marketing of wheat were shown.

The standing of the boys exhibiting was: 1st, Arthur Gooding; 2nd, Delbert Levagood; 3rd, Henry Brown; 4th, Lloyd Fisher; 5th, Col in Hogg; 6th, Milford Cressman; 7th, Douglas Burns; 8th, Ian Stanton; 9th, Charles Loader; 10th, Albert Krebs; 11th, Leslie Evans.

Arthur Gooding who was placed first in competition, won first place in the field competition also.

In the judging competition, Ian Stanton won first place, with Leslie Evans and Lloyd Fisher tied for second. Milford Cressman was third and Henry Brown fourth.

## Curling Notes.

With the advent of the chinook on Monday, it looked as if curling would be delayed, but one sheet of ice was still in shape on Tuesday evening when Fisher met and beat Reiber 11-7 in the opening game in the president vs vice president competition.

The skips were chosen for the competition and the rinks were drawn at a meeting held on Monday afternoon and everything is ready to get properly underway.

Ten rinks have been signed up and it is expected that two or three will be added when the season gets underway. Any curlers who wish to get on the roster should see T. Johnson at the barber shop.

At the close of the competition a dinner will be given by the losers and at that time skips and rinks will be chosen for the schedule.

The following rinks were chosen:

Brusso, Kirk, Ranton, ———

Dr. Clarke, W. Ross, Beveridge, ———

Fisher, Weber, Catleton, Hartley ———

Heselson, Jack Cathness, J. Sinclair, W. J. McCoy

Johnson, W. G. Liesemer, Friesen, ———

McLeod, T. Royds, G. Parsons, ———

McGhee, J. Wordie, C. Geiger, ———

McNaughton, W. MacFarquhar, ———

Pitt, Klein, Morris, McCann, ———

Reiber, Kirby, A. Thomas, K. McCoy

The rinks drawn for the competition are:

President Vice President

McGhee Johnson

MacFarquhar Pitt

Reiber Fisher

Brusso Heselson

McLeod Clarke

## BIRTHS

Didsbury General Hospital.

November 14: to Mr. and Mrs. Percy Lunt, a son.

November 17: to Mr. and Mrs. Harley Traub, a daughter.

November 23: to Mr. and Mrs. Willis Yoder, a daughter.

November 13: to Mr. and Mrs. Guy Sundberg, a daughter.

## Stores Open Wednesday During December

The stores and business houses in Didsbury will be open all day each Wednesday during December. Do not forget that the stores will be opened all day next Wednesday, December 1st.

## Horses Shipped In For Winter Feeding

During the past two weeks thirty-three carloads of horses have been shipped to Didsbury by the Saskatchewan Government and distributed among local farmers for feeding during the winter.

Twenty more carloads have been placed in this district and are expected to arrive within a few days.

These horses are being brought from the dried out areas and will be returned for work on the land in the spring.

## Wrecking Car Busy.

The Pioneer Garage has had a busy time the last ten days. Eleven cars which went into the ditch on the corner west of the railroad crossing and four cars at the corner south of town have been pulled out. No injuries were sustained and none of cars were seriously damaged. Too much speed on slippery roads was generally the cause.

## Obituary.

WILLIAM FREDERICK IMM

William Frederick Imm, aged 44 years and 5 months, well-known local farmer, died at the Didsbury hospital on Thursday, November 18 following an operation.

Born in Nebraska on May 19th, 1893, he was married to Miss Grace Evelyn McPeck on June 12th, 1917. He came to Didsbury in 1919 and purchased a farm about two miles east of town, where he resided up to the time of his death.

Besides his sorrowing wife, he is survived by two daughters, Clara and Margery. One son, William Dale, and one daughter, Helen Elizabeth, preceded their father in death. He also leaves to mourn his loss, his mother and six sisters, Mrs. Fred Hammond of Hartford, Kansas; Mrs. Arthur Price of Olpe, Kansas; Mrs. Lyle Buckley, Topeka, Kansas; Mrs. C. A. Nicholas, Emporia, Kansas; Mrs. I. L. Klein and Mrs. Fred Astrup, of Didsbury.

The funeral service was held at the Evangelical Church on Monday, with Rev. A. S. Caughell in charge, and interment was made at the Didsbury cemetery. The funeral arrangements were conducted by the Durrer Funeral Home.

## Straight Fight for Lethbridge Seat

Andrew Smeaton, nominated by the Canadian Labor party to contest the Lethbridge provincial by-election, withdrew his nomination on Monday.

An official statement said Mr. Smeaton had "unreservedly withdrawn," but no explanation was given by the party spokesman.

The election is to be held December 2nd and nominations closed on Monday.

It will be a straight fight between Dr. P. M. Campbell, named by a 4-party unity convention at Lethbridge on November 2nd, and A. J. Burnap, Social Credit, chosen at a social credit convention on November 10th at Lethbridge and confirmed by the central committee, with Premier Aberhart at its head, which sat at Lethbridge last Friday.

The vacancy was created by the resignation of Hans Wight, Social Credit member. Mr. Smeaton represented the Lethbridge riding in the legislature from 1926 to 1935.

## Amateur Night at Melvin Hall

The Didsbury Band sponsored an "Amateur Night" at Melvin Community Hall last Wednesday evening. The weather was unfavorable and there was only a fair crowd but there was a very good entry of contestants, resulting in a very good concert.

The Band gave a number of selections during the evening.

The following were the prize winners:

Children's section: 1. Clary Youngs; 2. Em Dupont; 3. Bernice Steckley; 4. Bobby Hughes; 5. Len Krebs.

Instrumental section: 1. Mildred Deadrack (piano solo); 2. Misses Eileen and Gladys Geeson (piano duet); 3. Clifford Murphy (guitar).

Adults Vocal: 1. Alex Robertson; 2. Westcott Male Quartette; 3. Jack Robertson; 4. Gladys Geeson.

Tap Dancing: 1. Olga Dupont; 2. Marie Lumsden.

Miscellaneous: 1. Two part song by six girls; 2. "Minuet" by four girls.

Pupils of Melvin School were directed by Miss Hazel Ray.

## Postpone Establishment Larger School Area.

The protest committee "for large school unit" of the Olds division, that is the territory running from Bowden, south to Airdrie, and from 20 miles east of C.E. railway line to the Mountains, has recently received word from the department of education that this unit will not be proceeded with this year; that the question would be raised again next year, and that the department would hear any representations which the committee might wish to make.

The committee earnestly requests all schools in this division to complete the votes now being taken and send them in as soon as possible to the secretary, Mr. Rosa Phillips, of Olds. They also suggest the desirability of forming an association of all school districts to protect the interests of the rural voters in this part of the province.

Coburn School was the first to send in their returns—2 for the large school unit, 39 against.

Rugby S.D.: 3 for, 38 against.

Zella S.D.: Not completed, 1 for, 52 against.

Inverness S.D.: Not completed, but about same average as above. —Contributed

## Municipal Officers Ask for Hail Insurance

Establishment of credit for operation of the hail board was urged upon the provincial government in an amended resolution passed by the Alberta Association of Municipal Districts while in convention at Edmonton.

Wording of the resolution put to the convention by the chairman, Paul Farnalls follows:

"Be it resolved, that this association urge upon the government of Alberta that every effort be used by the government to bring about such an improved position in the financial condition of the hail board as would enable it to obtain a sufficient line of credit to operate."

## Irrigation And Immigration

Two major questions of public policy are at the present time engaging a good deal of attention in Western Canada, frequent reference being made to them at meetings of organizations and in the news and editorial columns of the daily press. They are the problems of irrigation and immigration.

On the face of it, it may appear that these two questions have little or nothing in common with one another but a little reflection shows that they are, or ought to be, closely related when either subject is brought up for discussion and consideration.

Their relationship becomes apparent when it is remembered that the economic fate of the farmer of the present day in the West and that of the future settler is dependent upon the presence or absence of sufficient moisture to ensure the growth of field crops and the maturity of livestock, and when consideration is given to the probability, nay almost the certainty, that the West will again sometime in the future be subjected the ravages of drought.

Much of the present day opposition to immigration would vanish into thin air if there were some assurance that the next visitation of drought conditions would witness a supply of irrigable water in storage for the maximum acreage that could be served from this source in such an eventuality.

History, as demonstrated by geological data and revealed in the growth of trees over the past 200 or 300 years, has shown that the prairies for centuries have been subject to recurrent periods of drought of varying intensity and duration and there is no reason to believe that in this respect history will not repeat itself in the future. In fact, meteorological and other authorities appear to be in unanimous agreement on this point and only recently one expert was quoted as stating that the West will always be subject to drought periods.

This being taken for granted it appears to be a rational suggestion that advantage should be taken of the experiences of the past eight years to provide, as soon as possible, for the storage of available waste water to the maximum extent of engineering feasibility.

To some extent this is being done under the Prairie Farm Rehabilitation Act, but where the programs being carried out or mapped out for future undertaking meet the desideratum of maximum engineering possibility is debatable.

It is true that it would be folly to attempt to carry out projects which are beyond the realm of engineering feasibility, but there are some authorities who contend that some schemes which come within this scope should not be undertaken because they are not economically sound, in other words, they would be so expensive that they could not possibly be self supporting. Crop returns could not support the overhead, is the contention.

It is just these projects, those which are feasible from the engineer's viewpoint but regarded in some quarters as economically unsound which might well be subjected to further scrutiny and survey in the hope that some measures might be devised to relieve them, if constructed, of some portion of the overhead which seems to be the stumbling block.

If, for example, these projects in the doubtful economic category could be utilized as a form of public works program, financed substantially by grants in aid from the Dominion treasury, at least to the extent to which cash is now being donated for the sustenance of the same number of men who are idle, can it be doubted that some of these undertakings might be relieved of sufficient carrying charges to bring them within the scope of economically feasible undertakings as well as engineering possibilities?

It has been urged that the Dominion government has no legal authority under the British North America Act to carry out public works except through grants to the provinces, but assistance presumably can be legally given in that form and, if so, why not?

The point is that large sums of money are now being expended from the Federal treasury to sustain thousands of families without giving them an opportunity to contribute a quid pro quo. If some of this money could be utilized to provide work for a substantial number on projects which would be of permanent benefit to the principal industry of the West, agriculture, it would serve the double purpose of maintaining the morale of large numbers and possibly of making economically feasible some projects which are now in the doubtful class by relieving them of a portion of the carrying charges. At any rate, the idea is worthy of further investigation on the part of the authorities.

While immigration as a topic has been more or less shelved during the summer months and particularly after it became apparent that the West as a unit was to sustain this year a disaster of the greatest magnitude there are indications that efforts are being made to actively promote settlement schemes in the immediate future. Brigadier-General Hornby was recently quoted as stating that the time for talk has passed and action must be taken and Commissioner Lamb of the Salvation Army is touring the West, presumably particularly interested in the question of migration from the British Isles.

To the average individual farmer and farmer organizations any proposal to push immigration and settlement schemes at this time appears to be unpropitious, but to the extent to which crop yields can be assured in future through irrigation and conservation projects, to that extent at least, opposition to plans to bring more people into the country to engage in agricultural pursuits would diminish.

Subways are becoming the leading means of transportation in Moscow, Russia.

## New Cunard Liner

Progress Made In Construction Of White Star Liner No. 1029

Good progress is being made in the construction of the Cunard White Star liner No. 1029 at the shipyard of Cammell Laird & Company, Birkenhead.

The new vessel will be nearly 750 feet in length and have a gross tonnage of over 30,000.

Features of the hull design will be the terraced bridge superstructure, cruiser stern and two masts. In addition, the latest idea of installing two large funnels only (instead of three or four) in big ships will be adopted.

This will mean not only increased deck space for games and promenading, but also increased interior passenger accommodation.

No. 1029 will be a twin screw vessel driven by Parsons' single reduction geared turbines. Steam will be supplied from high pressure water-tube boilers.

Three classes of passenger accommodation will be provided—cabin, tourist and third class—and for all classes the scale of accommodation will be on spacious up-to-date lines.

An idea of the size of the vessel can be obtained from the fact that there are ten decks. These include a sports deck and a sun deck giving good space for open-air activities in all classes. In addition there will be an unusually large number of sheltered promenade spaces available for passengers.

On the promenade deck there will be an extensive series of public rooms for cabin passengers. These will include an observation lounge and cocktail bar, grand hall (fitted with dance floor), lounge smoking room, writing salon, library and children's room. There will be a gymnasium, swimming pool and verandah cafe.

The public rooms for tourist class passengers will meet the requirements and taste of the ever increasing number of people who travel in this class, and include lounges, smoking room and cocktail bar and a children's room, also a gymnasium.

Third class passengers will be provided with lounge, smoking room, children's room and unusually extensive deck spaces (both sheltered and open).

There will be facilities for entertainments, including dancing and "talkie" cinema shows in all three classes.

The keel of No. 1029 was laid down on May 24th, 1937. It is expected that the vessel will be launched in the summer of 1938 and ready for service in 1939.

Isle Royale, largest island in Lake Superior, is about twice as far from the state of Michigan as it is from the state of Minnesota, yet it is a part of Michigan.

A collier once found its way from Indiana to Oregon, a distance of about 2,200 miles.

READY TO BRING  
YOU RELIEF  
IN MINUTES

## THE REASON

## "ASPIRIN" WORKS SO FAST

Drop an "Aspirin" tablet into a tumbler of water.

By the time it hits the bottom of the glass it is disintegrating.

This speed of disintegration enables "Aspirin" tablets to start "taking hold" of headache and similar pain a few minutes after taking.

YOU can pay as high as you want for remedies claimed to relieve the pain of Headache, Rheumatism, Neuritis, Sciatica, etc. But the medicine so many doctors generally approve—the one used by thousands of families daily—is "Aspirin".

Simply take 2 "Aspirin" tablets with a half glass of water. Repeat, if necessary, according to directions.

Usually this will ease such pain in a remarkably short time.

For quick relief from such pain which exhausts you and keeps you awake at night—ask for "Aspirin".

"Aspirin" tablets are made in Canada. "Aspirin" is the registered trade-mark of the Bayer Company, Limited, of Windsor, Ontario. Look for the name Bayer in the form of a cross on every tablet.

## ALICE STEVENS' RECIPES

HOME MADE CANDY MAKES  
POPULAR CHRISTMAS GIFTS

Christmas is almost here. Times are hard and you are finding it difficult to do much Christmas shopping. Why not plan to make a number of your gifts in your own kitchen?

If you have allowed high-pressure salesmanship to commercialize your Christmas, you have lost the true spirit of the first Christmas. The loving thoughts back of the gift rather than the gift itself are what count most. This year the gifts should be inexpensive and practical, rather than expensive and useless. This latter type are usually wrapped away and forgotten.

Why not visit your cellar shelves and take down a few jars of your best apple jelly? These would make very lovely gifts. When making your mincemeat, make a little extra and some of your friends would be very happy to receive a jar.

A box of home-made candy is very much enjoyed by every member of the family. In many cases, the ingredients used are better than in bought candy and it is certainly much cheaper. On the farm you have your own milk, cream and butter. These are some of the most expensive ingredients of the candy.

The temperature is one of the most important parts of candy making. While a thermometer is most accurate, a little practice means that the cold water test is quite valuable. Use cold water and see the kind of ball that a few drops of the candy will make in this cold water. Fudges and maple creams need to be boiled to the soft-ball stage, while butterscotch and taffies need to be boiled to the hard-ball stage.

The humidity of the atmosphere is also important. It is harder to make good candy on a dull, cloudy day than on a bright, clear day. Boil the candy a little longer on a dull day. Have as little steam as possible in the kitchen. See that the kettle is not boiling.

Candy is very apt to be grainy. This can be avoided by adding a little corn syrup, vinegar or cream of tartar. There is a chemical change takes place in the sugar and the addition of one of these hastens the change. If the sugar does not make this change, the candy is sure to be grainy.

Do not stir the candy while boiling. The sugar should be dissolved before the candy starts to boil. Stir the sugar until it is dissolved. If crystals of sugar form on the sides of the pan during the boiling, wipe them off with a small piece of cloth tied to a fork. If the candy is covered during the first half of the boiling, these crystals are melted by the steam and there is less danger of the candy becoming sugary.

If the candy is to be beaten, as in fudges and maple creams, allow the candy to cool before starting to beat. Cool the candy, until you can hold the pan comfortably on your hand. Do not cool the candy suddenly by setting the pan in cold water.

## PINOCHE

2 cups brown sugar  
1 tablespoon butter  
1/2 cup milk  
1 teaspoon flavoring  
Melt the butter. Add sugar and milk. Stir until mixture starts to boil. Boil without stirring until the mixture forms a soft ball when dropped in cold water. (This will take about 12 minutes). Cool and beat. Nuts and fruit may be added, if desired.

Readers are invited to write to Alice Stevens' Home Service for free advice on home cooking and household problems. Address letters to Winnipeg Newspaper Union, 175 McDermot Ave. E., Winnipeg, Man.

With the aid of a wooden instrument, the Polish astronomer, Nicolaus Copernicus, decided that the earth revolves about the sun. The discovery was made 100 years before the invention of the telescope on Feb. 19, 1473.

## A Red Letter Day

Recent presentation of a pair of white gloves to Claude Elliot, headmaster of Eton College, Windsor England, fulfilled an ancient tradition. The presentation is made only when Eton's 1,600 students have been on perfect behavior for a week.

Untold wealth is that which does not appear on the income tax returns.

## Called A Perfect Crime

Collection Of 70,000 Banknotes Disappears From Owner's Home

London's perfect crime—the theft of the \$250,000 Avonmore collection of banknotes, unsaleable in the open market—has just been discovered.

The collection of 70,000 notes, in 110 leather-bound books, vanished from the home of Frederick Ernest Catling. There was nothing to show how the thieves entered the house. There were no fingerprints, no marks on any window, and no one heard a sound.

The steel, asbestos-lined safe, six feet high and four feet broad, had been neatly forced open. It had an ordinary patent lock.

## Has Proved Satisfactory

Germany Is Making Shoes And Gloves From Fish Skin

Germany's efforts toward raw material independence are brought out in an exhibition of shoes and gloves manufactured from fish skins. The exhibition shows that the manufacture of leather from fish skins is increasing rapidly, and it is reported that highly satisfactory tests have proved the strength and durability of this leather. Many concerns exhibit gloves and shoes of widely differing patterns. It is declared that fish leather articles will soon appear in retail trade.

A wild ass of the Gobi Desert, being pursued by men in an automobile, maintained an average speed of 30 miles an hour for 16 miles.

The following steamers have been scheduled for your convenience to enable you to spend a happy Christmas among your loved ones in the Homeland.

## Discovery Of Helium Is Classed As One Of The Real Romances Of Science

The discovery of helium and its final production at a relatively low cost is one of the real romances of science. The existence of helium in the sun was known years before its presence terrestrially was announced. Prior to the early days of the war it was produced in microscopic amounts only, the cost averaging three hundred to four hundred pounds per cubic foot. It was then considered probable that helium, in view of its light weight and non-inflammability, would make an ideal filling for lighter-than-air craft. Examination of the natural gases from wells in many parts of the world proved that these contained helium in amounts varying from 0.25 to 1.75 per cent.

In 1925, by the use of apparatus similar to that used in the manufacture of liquid air, helium of 93 to 97 per cent. purity was obtained at a cost of fourpence per cubic foot, and a report recently issued by the United States Bureau of Mines states that the officials of the helium extraction plant at Fort Worth (Texas), where a large plant for extracting helium from natural gas has been erected, have now been able to effect certain mechanical improvements which will reduce the cost of helium even more effectively.

Every airship disaster which has occurred during the last few years, with one exception, has resulted in the burning of the ship. The exception was the United States airship Shenandoah—the only airship in which helium has been used as a gas filling in place of hydrogen. The inflammability of hydrogen enormously increases the danger to which airships and balloons filled with this gas are exposed, particularly in times of war. The fate which overtook most of the raiding Zeppelins during the war will be remembered; the writer has vivid recollections of a line of seven observation balloons being brought down in flames by one aeroplane within a few minutes of each other. "Popping off" observation balloons was a favorite amusement of all air forces, friendly and hostile.

The name helium was coined in 1868 by Sir Norman Lockyer, who observed spectroscopic evidence of the presence in the sun of an element not known terrestrially. The new element remained a solar mystery for nearly thirty years. In 1895, Sir William Ramsay isolated from a mineral cleveite a few bubbles of gas which proved to be the solar helium. Since then helium has been obtained in macroscopic amounts from many minerals, and its presence in the air to the extent of one part to 250,000 has been demonstrated. But, it was only when the helium content of natural gases occurring in different parts of the world was investigated that the possibility of large-scale production was evident.

The fact that helium was observed high in the sun's chromosphere suggested that the density of the gas would be very low. Hydrogen is the lightest gas known, but helium appears next on the scale, and although it is above twice as heavy as hydrogen, this is not sufficient seriously to affect the lifting power of eight per cent. less than hydrogen, but this loss is more than compensated for by its other advantages.

Helium is an absolutely inert element. It is non-inflammable and non-explosive, and it can be more readily traversed by electric discharges than can most other gases. These properties mean that the engines of an airship could be within the envelope, instead of in a special compartment below the envelope, as at present; and that the ascensional power of the airship could be raised or lowered at will by heating or cooling the gas electrically—an immense improvement on the valving necessary with hydrogen. There need be no loss of helium through valving; and since the loss of helium by diffusion through the fabric of the envelope is only half the amount lost in the use of hydrogen, recharging would be less frequently required. If an airship with a capacity of 2,500,000 cubic feet were kept permanently and fully inflated with hydrogen, a yearly supply of nearly 10,000,000

cubic feet would be required to make good loss by diffusion alone.

Even at present prices, however, helium is scarcely a practical proposition as a filling for commercial airships. The initial cost of filling an airship of 2,500,000 cubic feet capacity would be approximately £16,000 (at 1½d. per cubic foot), and a further annual charge of £24,000 or more would be required to make good losses by diffusion, etc. The lifting power of a vessel this size (cargo, crew and passengers) would be about sixty tons, so that it would cost nine pounds per ton per week for diffusion costs. It might be possible, however, to construct airships with a double envelope of which the inner part might be filled with the less expensive hydrogen. Experiments have also shown that 15 per cent. of hydrogen can be mixed with helium without affecting the non-inflammability and non-explosiveness. The speed of the Shenandoah was 70 miles, and its cruising radius without stopping was more than four thousand miles. Such a vessel could, in favorable circumstances, cross the Atlantic in 30 to 36 hours; and many a business man would willingly pay for the loss of a few feet of helium to make the journey so rapidly, easily and safely.

The possibilities of an Empire service of helium-filled or partially helium-filled airships are, therefore, not without foundation, and a more accurate survey of these possibilities ought to be undertaken as soon as possible by those responsible for the air development of the Empire. Helium is not available in inexhaustible amounts; and, although in Canada, in the natural gases from Ontario and Alberta, there is a potential source of about 12,000,000 cubic feet of helium a year, no attempt has so far been made to isolate and store this.

Once these natural resources are exhausted, helium will sink back to the position it occupied for so many years—that of a scientific curiosity; and, although, as in the case of coal, the day of ultimate starvation is not probably long distant, the uses to which helium can be applied, apart from aeronautics, are so important that a regular supply ought to be ensured. Oxygen, for instance, is so expensive that it can be used only for certain operations, such as welding. By the use of helium, which becomes a liquid at a considerably lower temperature than does oxygen—which means that the boiling point also is much lower—it might be possible to produce oxygen at a very much lower cost than at present, an achievement which would revolutionize the whole science of metallurgy. A helium Empire airship service is perhaps the more spectacular possibility, but the possibility of developments in other directions, and particularly in the realm of low temperature work, must not be overlooked.—Chambers' Journal.

### Little Boy Blue

Immortalized By Eugene Field Is To Have Monument

Little Boy Blue, immortalized by the genius of Eugene Field, is to have a monument in St. Joseph, Mo. A national campaign for funds for the enterprise is in progress.

Field lived in St. Joseph only a few years, but the events of those years shaped his career. There he was married and there was born his son whose death a few years later prompted the writing of the well-known poem. As a newspaper columnist, Field wrote worthily and was much appreciated. But his name always will be associated with the toy soldiers waiting faithfully where they were placed on the nursery chair.

Pennies of America's school children will help largely to pay for the monument. It will be a fitting tribute to one who gave touchingly beautiful expression to a universally sacred emotion. —Detroit News.

A musician declares that crooners always give themselves away. But even at that price we wouldn't want any. 2228

### Cattle Are Disqualified

Many Exported For British Market Have Ear Deformity

Reports recently received from Great Britain have mentioned the disqualification for the subsidy of a number of Canadian cattle, due to "defective ears," states the Live Stock Market Report of the Dominion Department of Agriculture. In one recent sale at Glasgow, 36 steers were disqualified. The sale price of these cattle was estimated to be about 40 shillings (\$8) per head less on account of the disqualification. Exporters should, therefore, cut out steers that show marks of any kind on the right ear, as examiners are particular in this respect and will not pass any animal that has any mark or deformity on the right ear.

The British regulations provide that imported cattle will not be eligible for the subsidy in all cases where the right ear has any punch hole of any shape in any position on the ear, half an inch or more across, and in the case of an animal which has any notch, snip or cut out of the edge of the ear, half an inch or more across and extending half an inch or more into the ear. It is quite clear that anything other than the insertion of a tag is inadvisable. The clincher type of tag, now in more or less general use for identification purposes, seems to give reasonably good satisfaction and is rarely torn out or lost.

In order to qualify for the subsidy, animals must have been on feed for 90 days, and, unless they bear on their right ears the identification mark of the date when they did go on feed, they are not eligible for the subsidy. Hence the importance of unimpaired right ears. The subsidy is apportioned as follows: for quality home-bred cattle, seven shillings per hundredweight of 112 pounds; ordinary home-bred, five shillings per 112-pound cwt.; quality import, five shillings per 112-pound cwt.; and ordinary import, two shillings per 112-pound cwt.

### South Britain Sinking

Becoming Higher Above Sea Level In The North And Lower In The South

Scientists state Britain is becoming higher above sea level in the north and lower in the south. But there is nothing unusual about this. Experiments prove that rises and falls are occurring all over the world, due to expansion and contraction of the earth's surface.

The interior of the earth is much more solid than the surface, and interior movements are therefore transmitted quite easily. But there is no need to be alarmed. The total rise and fall of Britain, in the last 50 years, is only seven inches.—Pearson's Weekly.

A French inventor claims to be able to direct a warship and fire its guns by radio. He deserves encouragement. A war which could be confined to radio wouldn't be so bad.

## The Strange History Of Three British Freighters Which Met In Table Bay

### Familiar To Old Timers

But Many People To-day Have Never Seen A Bootjack

The following is taken from the Enterprise, Oregon, Record Chief-tain: One of the forgotten household implements is the bootjack. Young men of to-day don't know what you mean when you speak of it, and whole families never have seen one. But there it was in the old days, kicked around on the back porch, often hidden under the wash bench and inclined to elude pursuit when most urgently and noisily needed.

It was not an elaborate piece of furniture. You could make one in a few minutes if you had a hammer and saw and a bit of six or eight inch board from twelve to eighteen inches long, with a scrap for cross-piece. You cut a notch in the end of the board and nailed a sturdy cross-piece not far from the middle and the thing was done. Of course, if you had a really good home and a classy farm you put a little style into the bootjack, selecting a planed board and cutting the notch rounding to fit the heel of a boot, although the V-shaped notch served to draw millions of boots.

There was only one way to use the implement. You placed it on the floor with the cross-piece underneath and the notched end away from you. Then you stepped with one foot on the near end of the board, causing the other end to tilt into the air high enough so that the upper part of the heel of the other foot fitted into the notch. Steadying yourself with one hand against the doorjamb, you yanked and pulled until the boot came off, when you repeated the operation with the other foot. The common practice was to kick the jack back against the wall and pick up your boots and carry them into the kitchen. This little ritual signified that the day's work was done.

The bootjack belonged to the age of conquest, to the day of the clipper ship and the covered wagon, that intermediate period between the settled days of the old world and the feverish present of the new. It was part of life when America was all frontier and we lived in the thrill of dreams of the beyond. Then men wore boots.

### Reward For Cheerfulness

Gerry Reed of Allentown, Pa., is \$10,000 richer because as a newsboy he served his customers with a smile. Reed, now 18, was left that sum in the will of Oliver H. Gernert, former Allentown theatre operator, who liked the boy's cheerfulness.

Tripoli and the Balkans were the scenes of the first use of airplanes in warfare.

### She's Done Entirely in Crochet

Household Arts by Alice Brooks

An Exclusive Alice Brooks Design

### PATTERN 5969

Here's a lovable 16-inch doll all ready to dance her way into some youngster's heart on Christmas! She'll delight you, too, as you watch her roll off your crochet hook—she's done entirely in single crochet, worked 'round and 'round. You'll crochet her hair just like a little wig—embroider her features and she's ready for her slip (that alone is of material) and her dainty dress crocheted in a simple mesh. She's done entirely in wool even to her saucy eye-lashes! In pattern 5969 you will find a pattern of a doll that measures 16 inches in height and a pattern for the slip; instructions for making them and the dress; material requirements.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermot Ave., E., Winnipeg.

There is no Alice Brooks pattern book published

Three ships which have made news lay in Table Bay harbor the other day. They were British cargo steamers, and their names have been splashed across the pages of the world's newspapers at one time or another. Disaster striking swift and suddenly brought each ship its claim to notoriety. Two of them are ships which have been dead, but are alive again—they were crossed off the register as total losses, but now they sail the seas again bearing little trace of their brush with fate.

Two years after she had been completed, one of them lay in Adelaide harbor discharging cargo. Gas, leaking into the shaft tunnel, ignited and a shattering explosion shook the ship. The chief officer, who was standing at No. 4 hatch, was blown over the side and across the quay, and half-a-dozen men were killed. The blast split the 6,000-ton ship almost in half and fire gutted the wreck, and it lay a smoking hulk.

Condemned as a total loss, she was saved from the scrappers by an alert Dutch towing firm, who bought her as a speculation. They sent two of their famous towing-tugs 11,000 miles from Holland to Adelaide, and they towed the hulk, temporarily made seaworthy, back to Amsterdam. It was the longest towing job of its kind ever attempted and took many months.

At Amsterdam the new owners rebuilt the wrecked ship and made her into a new vessel. They ran her under the Dutch flag and earned good profits. The original owners, astonished to find they had thrown away a good ship, bought her back, and gave the Dutch speculators a good profit on the deal.

Not far from her lay the ship which was once longer than the Queen Mary. She had had an operation such as falls to few ships' surgeons.

Some years ago she was steaming through the Channel. Fog landed her hard and fast on the Goodwin Sands, tugs raced to her aid, but failed to refloat her. A rising storm drove them off for the night. At daylight they returned, to find only her bows left on the shoal. Of the stern portion there was no sign. They salvaged the bows and towed them into the Thames. Hours later reports came in that ships had sighted a queer-looking vessel well down the Channel. It was the second part of the ship, containing the valuable engines, navigating its way out to sea.

The tugs captured it, towed it to London, and then, with its fellow, to Amsterdam. Dutch ship surgeons joined the two parts together again in dry-dock. To-day she sails again, reaping the benefits of booming freights for her owners.

The third of the trio lay a ship's length from the other two. Four years ago she was making along through a Californian fog. There was a muddled exchange of siren signals, which was cut short by a terrific crash. America's 10,000-ton cruiser, Chicago, just out from the builders' yards, wallowed in the swell, apparently mortally wounded, for the freighter's bows were driven three-quarters of the way through her amidships. When she withdrew, the merchantman's bows were shortened by 25 feet.

The two vessels limped back to San Pedro, and litigation still wages in the States over the disaster which cost the lives of half a dozen men and caused \$100,000 damage. The freighter, repaired again, sails from port to port on her lawful occasions.

These were the "skeletons in the cupboards" of the three British freighters which met in Table Bay.—Johannesburg Star.

### Invention Brings Fortune

A fortune is being made by a man of 77 who, after 16 years of self-imposed poverty, living on £2 a week, invented and patented a method of turning old Bibles into gun-cotton, artificial silk, cellulose, and expensive note paper. His machinery has already been installed at a Cardiff factory and at eight others in various parts of the country where armaments are being made from ancient Testaments.—London Daily Express.

## The World of Wheat.

By H. G. L. STRANGE

"Millers won't buy Garnet. It is harming the reputation of Canadian wheat. Farmers should not produce it!"

These statements have been heard for some time past, and those who make them point for proof to the wide price-spread now current between No. 1 Northern on the one hand and No. 3 Northern and Garnet on the other.

I venture to utter a word of caution to those who are tempted to judge the question of Garnet by the present price situation.

No authority at any time has ever pretended that Garnet is as good a quality of wheat as is No. 1 Northern. There is excellent evidence to indicate, however, that Garnet certainly is of as good all-round quality as is the normal No. 3 Northern, and that Garnet is equal at least to those worldwide average quality wheats such as Australian, Argentine, Russian, Indian and Danubian.

The millers of the world have actually bought since 1929, I calculate, not less than 200 million bushels of Garnet, and have found a use for it. I am bold enough to predict, therefore, that when the supplies of No. 1 and No. 2 Northern become less scarce than they are at the present time, the normal price-spread between 1, 2, 3 and Garnet then will return.

Following factors have tended to raise price: Considerable frosts in Argentina -- Drought causes anxiety in South Africa -- Canadian official 1937 wheat estimate reduced to 183 million -- British barley crop smallest on record -- Chinese walnut exports decline -- Holland likely to require larger wheat and flour imports.

Following factors have tended to lower price: Increase in U.S.A. official corn estimate -- All Italian bread flour must contain 5 per cent ground corn -- Roumanian autumn crops get splendid start -- Increase in Kansas sweet potato, soy bean and fruit production -- Freight rates between Europe and North America to be increased 20 per cent January 1st.

## Know Your Buyer Before Shipping Your Turkeys

"During the Christmas season complaints often come to hand from farmers who have forwarded consignments of turkeys, etc. to firms in this city, in response to press advertising and mail circulars, offering exceptional prices and other inducements.

"The ultimate result in many instances is that the farmer receives practically nothing.

"New firms arise and others have a change of name each year for this seasonal trade."

The following letter has been received by the R.C.M.P. from the chief constable, Vancouver.

In view of this letter farmers should be careful to learn the bona fides of the buyer before consigning poultry or other produce to Vancouver or any other city.

## Doings of Our Neighbors

**AT OLDS:** The Olds post office has moved to the former Canadian Bank of Commerce building and was open for business in their new home Monday morning. The building was bought some time ago by the Federal government and was recently renovated and new fixtures installed.

On Nov. 5th, Fritz Weiler passed away at Ponoka. He came to Olds in March, 1903, and worked on his cousin's farm for several years, and then homesteaded near Sunnyslope, at what is known now as Allingham.

According to a report in the Gazette, Olds will enter an intermediate team in the Central Alberta Hockey League. Four teams, Lacombe, Red Deer, Stettler and Olds, have already signified their intention to enter the League while Wetaskiwin is giving further consideration to the matter.

The thirty-seventh anniversary of the church now known as the Olds United church, was celebrated on Sunday and Monday, November 21 and 22. The church, which was at one time the meeting place of the Methodists, has served the community well since 1900.

**AT INNISFAIR:** This week, Mr. Andrew Anderson of Fogelvik Farm shipped one of his purebred Holstein Heifers to Toronto. The purchaser is Hon. M. Hepburn, premier of Ontario, who is one of Ontario's outstanding cattle breeders.

An all-time low record was set for election campaign expenses by one aldermanic candidate in the recent Calgary civic contests. Fred Nutt's total expenses during a 9-week campaign amounted to 33 cents—25 cents for street car tickets and four 2-cent stamps.

## Notice to Creditors and Claimants

In the matter of the Estate of Lydia Ann Ferguson, late of the district of Didsbury, in the Province of Alberta, deceased.

Notice is hereby given that all persons having claims on the estate of the above-named Lydia Ann Ferguson, who died on the 27th day of April, A.D. 1937, are required to file with Messrs. Sinclair and Jull, at the address given below, by the 10th day of January, 1938, a full statement duly verified, of their claims and any securities held by them, and that after that date the executors will distribute the assets of the deceased among the parties entitled thereto, having regard only to the claims of which notice has been so filed or which have been brought to their knowledge.

Dated at Calgary this 22nd day of November, 1937.

SINCLAIR & JULL,

Barristers and Solicitors,  
810, Lancaster Building,  
Calgary, Alberta.

Solicitors for the Executors of the Estate of Lydia Ann Ferguson.

# Protect Your Hard-Earned Savings

THROUGHOUT Canada, life insurance policyholders and beneficiaries should realize the menace to their own and the national welfare that lies in extreme and unjust legislation.

These policyholders represent 50 per cent. of the electors—federal and provincial. Through the institution of life insurance, they have so pooled their resources that their collective interest can withstand attacks that would bring financial disaster to the individual.

Despite war, epidemic, panic and depression, life insurance has met every policy obligation promptly and in full.

Despite the financial disturbance of the past six years, it has distributed, and continues to distribute, to its policyholders and beneficiaries, over \$500,000 every working day.

Seventy-five per cent. of this money has been, and continues to be, paid to living policyholders; the balance to beneficiaries.

Life insurance is the greatest co-operative business in Canada. No one doubts its strength and stability. No one questions the prudent and intelligent direction of its affairs.

It is the guardian of the hard-earned savings of 3,500,000 men and women in all walks of life.

Today there are forces in Canada that menace the welfare of these people. These forces would penalize their savings and impair their investments through legislation which cancels public and private debts—regardless of the debtor's ability to pay—and which tends to destroy the ownership of public and private property.

The interests of life insurance policyholders and beneficiaries—as of all other citizens whose savings are invested in one form or another in Canada—demand that promises to pay be observed, when the debtor is able to pay; that hard-earned savings which safeguard the homes and families of the Dominion be protected from unjust legislation.

**Westcott Notes**

The Women's Institute Bazaar and "Amateur Night" which was held at the Westcott School on Friday evening was a great success and was very well attended in spite of the cold and windy weather.

Mr. Harry Steckley acted as auctioneer for bazaar and the sale was very successful. The woolen bed throw was won by Miss Ivy Mitchell, with ticket No 622. The total proceeds for the evening amounted to \$95.00.

In the Amateur Concert, Mr. Pat Worthington acted 'Major Bowes' in a very creditable manner. The three capable judges were Mrs. M. Colwell (Cremona), Mrs. H. Levagood and Miss E. Farr (Clovermount).

Following is a list of the prize-winners:

Children's Instrumental  
1st Patricia Dexter  
2nd Phyllis and Bobby Hughes

Children's Recitations  
1st Bernice Steckley  
2nd Clary Youngs

Children's Songs  
1st Jean Dupont  
2nd Rodney Webster

Adult Instrumental  
1st Jean and Mary Robertson

Adult Recitations  
1st Edith Webster  
2nd Emil Dupont

Adult Solos  
1st Willie Weidner  
2nd Clifford Murphy

Adult Duet, Quartette and Trio  
1st Westcott Male Quartette  
2nd Vern Farrell and Miss Spence

Adult Comic Song  
1st Jack Robertson

Tap Dancing  
1st Olga Dupont

Mr. Jack Robertson, dressed as a lady in evening clothes, also delighted the audience with a song, "Miss Want A Man." It was a scream from beginning to end.

**Successful Pure Seed Plan**

The Junior Wheat Clubs of Alberta have been definitely proven to be the most potent method of improving the general run of wheat seeded in this province. These clubs have been operated for eight years jointly by the Alberta Wheat Pool and the provincial and federal departments of agriculture. The contribution they have made to the improvement of seed wheat is a striking one. No other plan approaches it in efficacy and educational value.

As its name implies, the Junior Wheat Club movement deals with the farm youth. It reaches the young people on the farm at an age when their minds are impressionable and when they are eager and capable of learning lasting lessons. These boys are taught the technique of growing good seed, and as long as they live that knowledge will stay with them.

Technical agriculturists have invariably found that adult farmers are set in their ways and that it is exceedingly difficult to change them and induce them to practice new methods. This is not the case with the farm youth. The fresh minds of these young fellows coming in contact with the trained, scientific agriculturist, are early led into right paths. Some of the men engaged in this work have mentioned how quickly the little brothers and sisters of the Junior Clubbers learn from watching their older brother operate his seed plot and are soon able to differentiate between the varieties of wheat themselves. When it is understood that between 40 and 50 of these clubs operate over the whole farming area of Alberta, it will be better realized how effective is the work of this farm youth training.

The objective is to educate the on-coming generation of wheat producers into the ways of sowing the best type of wheat seed. A wheat producer who knows how to handle a seed-plot can develop his own seed on an economical basis. All he has to do is to keep a seed-plot growing from year to year and he always has available a generous supply of excellent seed.

**Notes From the West**

Miss Margaret Shannon returned to her home last week after spending a few days with Mr. and Mrs. P. Hosegood.

Mr. and Mrs. Otto Krebs entertained at bridge last Thursday evening in honor of their guests Mr. and Mrs. Joe Kaiser of Calgary.

Mr. W. F. Brown and Mr. A. L. Hogg attended the municipal convention in Edmonton last week.

Mr. and Mrs. McGregor were Sunday visitors with Mr. and Mrs. W. Blain.

Mrs. Melunis entertained some of the younger people to a "Shorten the Winter" party Tuesday of last week, a good time being had at games and a delicious lunch served by the hostess, not forgetting the cream puffs.

**WEDDINGS**

A quiet wedding took place last Monday afternoon in the United Church Manse, when Miss Margaret E. Winch of Majorville became the bride of Mr. Samuel J. Francis of Cluny. The happy couple, accompanied by Mr. Hugh Winch, spent the weekend with the bride's brother Mr. Ivan Winch, and Mrs. Winch. They will make their home in Cluny.

**Items of Interest**

The Simpson sisters, Margaret, 20, and May, 19, Banff, Alta., seem to have skated right into the hearts of New York's sophisticated public. In mountie garb—a la femme—the sisters were encored into the spotlight four times at Madison Square garden, New York, in a new ice spectacle, "Gay Blades," presented by an international ice troupe comprised largely of Canadians. The 13,000 spectators reacted more spontaneously to the acrobatics of the girls than they did to the classic performances of the stars of the show, Maribel Vinsen, 1937 North American champion, and Karl Shaefer, seven times world champion.

**Application for Beer License**

PUBLIC NOTICE is hereby given that the undersigned intends to apply to the Alberta Liquor Control Board for a licence to sell Beer by the glass or open bottle for consumption on the licensed portion of the premises, and also to sell Beer by the unopened bottle for consumption elsewhere than upon the licensed premises, in conformity with the provisions of The Government Liquor Control Act of Alberta and the Regulations made thereunder, with respect to the following premises:

"Situated on the southeast corner of the ground floor of the Rosebud Hotel, Didsbury, Lots Eleven (11) and Twelve (12), Block Eight (8), Plan 474 I. Didsbury."

Dated at Calgary, the 8th day of November, 1937.

## WORLD HAPPENINGS BRIEFLY TOLD

Six South Africans have set out from Durban to make a voyage around the world in a small ketch—the "Land's End." The craft carries a 40-horsepower Diesel engine.

The failure of one flight will not halt Soviet Russia's aerial explorations in the Arctic regions. A. Vartanian, Moscow engineer, told interviewers in Portland, Oregon.

The congregation of the University of Oxford conferred the degree of master of arts on Lord Nuffield, the motor car manufacturer who has given millions to the university.

Building contracts awarded throughout Canada in October totalled \$20,169,900, a seasonal decline of seven per cent. from September but 34.8 per cent. over the total for October, 1936.

For the first time in eight years a Royal hunt will take place in Windsor Park this winter. King George VI., has decided to hold several hunts on the royal estate around Christmas time.

Vladimir Petrovich Vorobiev, surgeon and anatomy professor of international repute who supervised the embalming of Lenin's body for its mausoleum on Red square 13 years ago, is dead.

Six autogyros, built on new construction principles, have been ordered by the British air ministry. The craft will be two-seaters equipped with six lifting blades which will be propelled by the take-off motor.

A cancer research institute, adequately financed, should be established if Canada is to do her share in the scientific search for a cure, states Sir Frederick Banting, head of the department of medical research of the University of Toronto.

Contributions to China's war chest from Chinese abroad were listed officially as \$6,000,000, including \$180,000 from Canada, \$400,000 from the United States, \$150,000 from South America, and \$120,000 from Hawaii.

International Harvester Company announced its Australian affiliate would construct a \$2,000,000 farm implement manufacturing plant at Geelong, near Melbourne, Australia. The plant, to employ 450 men, was expected to begin operations next year.

### "Canada 1937"

This Season's Broadcasts Bringing A New Experience To Canadian Listeners

The radio series "Canada 1937" which scored such success last season started again last week. This season, this most spectacular of Canadian broadcasts will be heard Friday evenings at 10:00 p.m., E.S.T.

Outstanding commentators under the guidance of Vernon Bartlett will again speak from Europe—an interviewer in Canada probing for answers to the questions of the "man in the street."

Lionel Shapiro, Canadian correspondent in New York, will speak from N.B.C. studios, relaying such latest happenings of the Gay White Way as are of interest to Canadian listeners.

A new technique will be introduced in the talks on Canada to make the very pulse of the nation audible to listeners throughout the country. Mr. Walter Bowles will broadcast from a different locality each week, telling of that district's contribution to Canada's progress and interviewing "nation builders" who make that progress possible.

Yet another outstanding feature of the program will be the music—every selection will be specially arranged for the large orchestra and choir that is being used.

In sponsoring these broadcasts—to be again produced by Victor George—Imperial Tobacco Company of Canada, Limited, is bringing a new experience to Canadian listeners. These Friday evening programs are live demonstration of the fact that Canadian broadcasting is equal to the challenge for something new and spectacular.

## Farm Tires Show Big Increase

Nearly All Tractors Now Equipped With Rubber Tires

Attended by 115,000 farmers, over 70 tractors competed in the field at one time during the International Plowing Match held at Fergus, Ontario, from October 12 to 15. Only six tractors were on steel-lugged wheels, the remainder being rubber-tired, which reflects the tremendous growth of pneumatic tires for tractors since they were introduced at the Ottawa Match in 1930. Outstanding in performance were the tractors on Firestone Ground Grip Tires, as they won eight out of nine of the first awards, including the grand championship, captured by Fred Timbers, of Ringwood, Ontario, for the third consecutive time.

TWO GAY APRONS FROM ONE PATTERN MAKE WELCOME CHRISTMAS GIFTS  
By Anne Adams

Puzzled about what to give for Christmas? Here's your answer—the gayest aprons Anne Adams ever designed for easy making! See how the side panels are cut to form a well-fitting waistline! Style "B" is just as feminine as it can be, made up in dimity, dotted swiss or batiste, with a dainty bit of ruffling for contrast. Choose gingham, percale or chambray for "A", a tailored type that's all the brighter for its rick-rack trim. And now for a surprise—both these charming aprons are cut from one delightful design. So order Pattern 4591 and get busy!

Pattern 4591 is available in sizes small, medium and large. Small size takes 2½ yards 36 inch fabric. Apron A, 2½ yards trim and B, 1¾ yards. Illustrated step-by-step sewing instructions included.

Send twenty cents (20c) in coin or stamps (coin preferred) for this Anne Adams pattern. Write plainly Size, Name, Address and Style Number and send order to the Anne Adams Pattern Dept., Winnipeg Newspaper Union, 175 McDermot Ave. E., Winnipeg.

### The Only Safety

Three passengers killed when an automobile crashes into a rail fence—one passenger killed when a car backs off a wharf—two persons killed when a truck crashes into a railroad train. There is no limit, says the Ottawa Journal, to the ingenuity of mischance, and no safety but in caution.

### Plenty Of Results

"Results!" exclaimed Edison to an assistant marveling at the bewildering total of his failures—50,000 experiments, for example, before he succeeded with a new storage battery. "Results? Why, man I have gotten a lot of results. I know several thousands things that won't work."

The city of Chicago has a greater population than the entire state of Wisconsin.

There are no definite records to show that Stratford-on-Avon was the birthplace of Shakespeare.

The correct plural of teaspoonful is teaspoonfuls.

## Underground Highways

Thirty-Year Plan To Solve London's Traffic Problem

Underground highways will be the most notable feature of a 30-year plan to solve London's traffic problem, which is expected to be ready for approval by the end of this year, it was reported.

Sir Charles Bressey, principal technical officer of the Roads Department of the Ministry of Transport, has been working on the plan for three years.

He faced a problem complicated by the fact that London, unlike modern cities, was not built according to plan, and, unlike Paris, has never benefited from extensive reform projects.

Paris owes much of its present topography to Jacques Ange Gabriel, noted architect who built the Ecole Militaire and the older buildings facing the Place de la Concorde in the 18th century, and to Eugene-Georges Haussmann, who cut new boulevards through tangled old streets during the Second Empire.

London has excellent motorbus and underground rail service, but her principal streets are so inadequate that in rush hours pedestrians move faster than automobiles in Piccadilly or in the "city," the financial district.

Under the plan being completed, new traffic arteries are expected to be created in the outlying parts of Greater London, but underground roads probably will be necessary in the centre of the capital, where it would be impossible to demolish existing buildings in order to replan the street system.

Sir Charles is believed to be opposed to the use of elevated traffic lanes.

Transmission and engine friction use up about 12 per cent. of the fuel energy of an automobile.

Some of this new millinery looks as if it had made a forced landing.

## Sask. Leading in Fight Against T.B.

Other Provinces Look to It for Leadership—Sask. Has Lowest T.B. Death Rate in the Dominion

From Colonel Ibbotson Leonard, D.S.O., President of the Canadian Tuberculosis Association:

"The outstanding success achieved by your League in the battle against tuberculosis, and the fact that the death rate in your province is the lowest in the British Empire, is an example to sister associations in the other provinces."

This is but one of scores of messages received from all over Canada from leaders in the fight against tuberculosis congratulating the Saskatchewan Anti-Tuberculosis League on its record since the first sanatorium opened its doors twenty years ago—on October 8, 1917, to be exact.

Among the birthday greetings warm congratulations were received from various provinces. Space permits reproduction of only the most important messages:

From John McEachern, Chairman, Sanatorium Board of Manitoba:

"We wish to extend to your sanatorium warm congratulations upon your twentieth anniversary and the splendid result achieved. We especially pay tribute to the Saskatchewan system of free treatment resulting in the cleanest bill of health for tuberculosis in any province."

From Dr. A. E. Miller, of the Kentville Sanatorium, Nova Scotia:

"Through the tireless efforts of the League, Saskatchewan has attained the lowest death rate from tuberculosis in Canada. Your method of tuberculosis control is a model for all countries in America to follow. We predict that in the next decade tuberculosis will be a minor cause of death among the white population of your province."

From Dr. P. A. Creelman, of the Prince Edward Island Tuberculosis League, P.E.I.:

"Our congratulations on the magnificent success that has been attained in Saskatchewan since your organization began to function. We watch very closely its operation and quote frequently what an outstanding example it is and what can be done along recognized principles in the controlling of this disease."

From Dr. W. H. Hatfield, Provincial Medical Director of Tuberculosis Control, Vancouver, B.C.:

"You have done a marvellous piece of work in Saskatchewan, and I trust that some day the whole of Canada may be able to demonstrate as low a death rate as that shown in Saskatchewan."

Much of the credit for this remarkable record is due to the educational and preventive work of the League, which is financed largely from the sale of Christmas Seals.

Everyone can help by buying Christmas Seals

Through continuous educational efforts the people of Saskatchewan now realize that tuberculosis is 80 per cent. curable if discovered and treated in its early stages.

Periodic clinics, at eleven centres, and travelling clinics, financed from Christmas Seal Sales, provide facilities for early diagnosis, thus reducing the number of advanced cases admitted to the sanatoria, shortening their period of treatment and suffering and reducing the cost to the taxpayers generally.

But, despite Saskatchewan's splendid record, tuberculosis still provides one of the most serious disease problems we have to face. Every third death in the age period between 15 and 45 years from acute infectious disease is due to tuberculosis. There must be no let-up in the fight against tuberculosis in Saskatchewan!

Everyone can help to stamp out tuberculosis by buying Christmas seals. A facsimile of this year's seal is reproduced herewith. When the opportunity to purchase a supply of seals is given you remember that your contribution, however small, is urgently needed to assist in still further reducing the mortality from this preventable disease.

## New Zeppelin

Helium Purifying Plant To Be Built In Germany

The Zeppelin company ordered a helium purifying plant built in Germany, to be ready when the new Zeppelin, No. 130, takes the air next spring for her maiden voyage to Lakehurst, New Jersey.

Helium, which deteriorates in the course of time, will periodically be emptied from the airship containers and subjected to a process of purification and used again. It was explained the high cost of helium (which must be purchased from the United States) is the reason for strictest economy.

## Model Leaves Fortune

Native Of The Island Of Capri Was Picturesque Character

Called the "characteristic fisherman" although he never fished in his life, A. Spadard, native of the island of Capri, reputed to be "the most photographed man in the world," is dead. He was 81.

Hundreds of artists painted him in his picturesque red beret and long white beard and thousands of tourists photographed him.

Spadard left a small fortune from fees he received as a model.

If an egg rattles when shaken, it indicates that the egg is not fresh. The air space inside the shell has become large through slow evaporation.

**Health LEAGUE of CANADA**  
presents  
**TOPICS of VITAL INTEREST**  
by **DR. J. W. S. McCULLOUGH**

ARTICLE No. 17

"Cancerphobia"

Cancerphobia means fear of cancer. This fear is present to some degree in every adult person; it is particularly existent among women. Everything possible should be done to moderate this fear. When the writer began his campaign of lecturing about cancer some years ago, he happened to meet on a railway train a medical friend of college days. Horace Blank was a genial chap, debonair, immaculate and clever. He was at the time, and had been for many years, the head of a hospital clinic in a special line; his opinion in most matters of medical thought was valuable.

He said to me, "Where are you bound for, old chap?" "I'm going to B—," I replied, to lecture to a group of women about cancer."

"Don't you do it!" he exclaimed. "You'll scare the life out of them. You'll give them cancerphobia."

I rather demurred at this suggestion but I had no real argument wherewith to counter my friend's emphatic advice. I pondered with some uneasiness about the matter.

At the close of the lecture which was listened to with great interest by an audience of some 250 bright and intelligent women, I tried an experiment with them, one which has since been repeated scores of times. I told the audience of the warning I had received. "Now," I said, "I should like to ask you, if, after hearing what I have had to say about cancer, is your fear of it increased?"

There was a unanimous dissent to anything of the kind. The women gathered about me asked all manner of pertinent questions about cancer and evinced the strongest desire to learn, in the shortest possible time, all the information they could. Neither on this occasion nor on many others of a similar nature, has there been the slightest indication that a truthful statement of the facts about cancer, induced cancerphobia.

The facts about cancer are reassuring in that they offer high hope to the victim if he or she has been taken in hand at an early stage of the disease. Widespread knowledge about cancer is the surest avenue to this happy condition of things.

Next article: "Prospect for the Cancer Patient."

Editorial Note: Readers desiring the complete set of Dr. McCullough's cancer articles at once may secure same by writing to—

## New Style Horse Collar

Contains Special Rubber Tube That Makes It Flexible

Some one interested in animal welfare recently has devised a collar for horses that will not scuff nor chafe their necks. In appearance it is like the conventional collar, but contains a special rubber tube that is inflated with air at about five pounds pressure. This renders the collar so flexible that it is asserted a hand can be slipped between it and the horse's shoulder even when a full load is being pulled, reports The Compressed Air Magazine.

## CARRY YOUR ALKALIZER WITH YOU

The fastest way to "alkalize" is to carry your alkaliizer with you. That's what thousands do now that genuine Phillips' comes in tiny, peppermint flavored tablets—in a flat tin for pocket or purse. Then you are always ready.

Use it this way. Take 2 Phillips' tablets—equal in "alkalizing" effect to 2 teaspoonfuls of liquid Phillips' from the bottle. At once you feel "gas," nausea, "over-crowding" from hyper-acidity begin to ease. "Acid headaches," "acid breath," over-acid stomach are corrected at the source. This is the quick way to ease your own distress—avoid offense to others.

## WHAT HO!

—By—  
RICHARD CONNELL

By Arrangement With Thomas Allen, Publisher, Toronto.

### CHAPTER I.—Continued

He had adopted "Noblesse Oblige" as his own private motto; but being a Bingley, and living up to it, were not always easy in Bear Falls. There were times, and this was one of them, when he felt an exigent desire to sally forth with a baseball bat, in lieu of a battle-axe, and play requiems on the skulls of his tormentors, beginning with the large, polished skull of Otis G. Wyncoop.

However, the Wyncoopian skull, and the other skulls went unmolested that night, for Ernest counted ten, and decided to expend his steam on the less sanguine project of arranging his exhibit of birds and beasts for the state fair.

On this labor of love he had toiled, intermittently, for some four years. In natural settings and realistic poses, he had arranged family groups of robins, orioles, quail, sparrows, muskrats, chipmunks, coons, coyotes, rabbits, gophers, wild cats, hawks, crows, badgers, cat-birds, kingfishers, skunks, swallows, otters, and other feathery and furry denizens of Iowa.

Mr. Slocum, dropping in now and then from his booteries, had pointed out that the commercial value of this undertaking was highly doubtful, since, as Mr. Slocum put it, the number of folks in Iowa with a craving for a houseful of varmints could be counted on the thumbs of an eel. Nevertheless, Ernest worked on. He finished the final feather on the last snipe the day before the fair opened.

### CHAPTER II.

As Ernest was the sort of man who gets crowded into corners, and who in restaurants is always given a seat which commands a view of the kitchen, he found himself, and his exhibit, tucked away in an obscure corner of the exhibition hall, almost completely hidden from view by the Grundy Center Grange's display of elephantine pumpkins and mastodontic cheeses.

However, a fellow-townsman had fared better when the spaces were allotted. Mr. Otis G. Wyncoop, with masterful bellows, had demanded and received the most conspicuous spot in the centre of the great hall. Here a corps of workmen had set up the exhibit of Wyncoop's Wonder

Weenies, conceived and designed by Mrs. Wyncoop, personally.

"I intend to give it," stated Mrs. Wyncoop, while in the throes of creation, a "touch of whimsy."

"Oke," said her husband, "only don't forget to feature the product. I'm selling sausages, not whimsies."

"I am aware of that," said Mrs. Wyncoop. "The sausages will not be slighted, I assure you. Now, may I have carte blanche?"

"If you need her, get her," assented Mr. Wyncoop. "Class is what I'm after. I'm a class concern."

"Class you shall have," promised his wife, "but class costs."

"Splurge away," directed Mr. Wyncoop. "I won't kick at the bills if we win the prize. The ad will be worth thousands to me. Why, say, I could tie a little blue ribbon around each individual weenie and jack up the price."

So Mrs. Wyncoop's fancies took concrete form, and the result was a floral grotto, festooned with a profusion of roses each with a tiny electric light in its artificial bosom. In this colorful bower stood the good horse Tartar, caparisoned now with a saddle and bridle of snow-white leather embellished with rhinestones. Enthroned on Tartar sat a shapely young lady whose somewhat sketchy costume of gauze was supplemented by a cascade of blonde hair which rippled to her waist. She smiled alluringly at the crowd and chewed gum when Mrs. Wyncoop was not watching. Mr. Wyncoop assumed that her name was Blanche, and thus, to her surprise, addressed her. Just who this nymph was supposed to be was a moot point among those who thronged around the spectacle. Some opined she was Lady Godiva, others maintained she was Joan of Arc, and others held that she was either the Spirit of the Middle West, or Miss Bear Falls. She carried a silken banner which bore the device, in gold on purple, "The Weenie That Won The West." Lest there be any lingering doubt as to which weenie merited that distinction, above the whole exhibit a vast sign flashed forth, first in pink, then in amber lights, the word "Wyncoop".

True to her promise, Mrs. Wyncoop had not neglected the less fanciful and more educational side of sausage making. Beside the rosy grove was a tiled compartment which had the antiseptic air of an operating room. Here eight pretty girls in white uniforms which made them look like a squad of lady hussars, tended a large machine of gleaming nickel. From its maw, at intervals, emerged the tid-bit that had made Mr. Wyncoop rich and famous. As the new-born weenies came out of the everywhere into the here, they were promptly collared by an efficient young hussar and popped onto an electric grill. There they sizzled until another hussar, armed with toothpicks, impaled them and presented them to passersby, and, since they were free, the passersby were numerous.

About this exhibit proudly hovered Mr. Wyncoop, who in face and figure looked like a large-scale caricature of one of his own products. However the report that a near-sighted agriculturist from Coon Rapids had attempted to put mustard on Mr. Wyncoop's nose may be set down as a canard started by a jealous competitor. Mr. Wyncoop could be distinguished from his creations by the fact that he wore a tweed suit and had a bass voice.

With him, her slightly bedewed brow ready for the laurel wreath, was his wife, Armina, who wore, among other things, her Chicago shoes and her mink coat. The day was mild to the point of downright balminess, but Mrs. Wyncoop wore this fury mark of caste almost as constantly as its original owners. The weather and the wrap conspired to make Mrs. Wyncoop wilt damply, but she stuck to her coat, and vice versa, a martyr to a good cause. One of the three judges who would presently pass on the exhibits was no less a personage than Mrs. Clara-Martha Phelps, active president of three clubs, past president and founder of two others, and a member of a score more, to whom, socially, Mrs. Wyncoop was as an ant-hill to an alp. In her mansion in Des Moines, Mrs. Phelps conducted a celebrated salon at which worthy causes were espoused, swamis and yogis expounded their esoteric philosophies, and papers were read on the Lake Poets, Bach and penology. To sit in this select circle and inhale lungfuls of culture was Mrs. Wyn-

## Insist on AIR CELL THE GUARANTEED RADIO "A" BATTERY

● Thanks to modern science, the old nuisance of recharging "A" batteries has been ended forever. Eveready AIR CELL, the best source of "A" power for radio sets, never needs to be recharged. It renews its power from the air, day in and day out.

Install an Eveready Air Cell in your radio—and forget about "A" power for 1,000 playing hours! All you need to do is to add a little ordinary water every few months. Think of the trouble you save yourself—to say nothing of the money!

Remember this, too, about Air Cell. It maintains its full power to the end. No periods of fading power which spoil reception.

Eveready Air Cell is not an experiment. It has proved its worth for seven years—in every type of Air Cell receiver. Don't waste money on fads and experiments which you hope will work! You can count on Air Cell—it's guaranteed for a minimum of 1,000 playing hours!

coop's most ardent ambition. So she wore her mink coat, as a badge and a symbol. Mrs. Phelps had one, and Mrs. Wyncoop cherished the hope that Mrs. Phelps would sense that they were sisters under the skin.

Frisking in the shadow of his parents was their son and heir, Master Mervin Wyncoop, in the electric blue and cerise uniform of a brigadier general in the Bear Falls Military Academy, "a he-school for manly boys." Master Mervin, looking like a junior weenie, was tickling strangers with a feather-duster, bought for that express purpose, and was planning to ruffle the composure of the young lady on the horse as soon as a suitable opportunity presented itself. To keep in training for this enterprise, Master Mervin, every minute or so, snatched with nimble, chubby hands one of the sausages sputtering on the grill, and bolted it whole, displaying a pelican-like capacity astonishing in one of his tender years. The many bright brass buttons on his uniform tugged at their moorings, and he began to bulge, visibly, in all directions. Still he continued to stoke himself with sausages, while Wyncoop senior beamed his approval. Just as the roomy Mervin threatened either to contradict all the known laws of physics, or explode, the committee of judges, in solemn procession, approached the Wyncoop exhibit.

Mrs. Clara-Martha Phelps, as befitted her rank, came first, followed by a lean Congressman and a fat Mayor. Mrs. Phelps was a giraffe-shaped lady, two ladies tall, and one lady wide.

(To Be Continued)

The star Arcturus is 11,000,000 times farther away from the earth than the sun.

Apples growing on neighboring trees were baked by the intense heat of the flames during a sawmill fire at Durlay, South Hants, England, in 1930.

Gold hoardings in India are such that no one can accurately estimate the amount; the common estimates, however, set it at above \$5,000,000,000.

## LOCAL & GENERAL

Mrs. A. W. Axtell, of Caroline, is visiting friends in town this week.

Mrs. Ranton was a visitor in Calgary over the weekend.

The Pauline Beauty Shop has moved from Mrs. Wilson's to the Petersen Block, Room 7. (47p)

Mr. Lorne Good, inspector of schools, of Wainwright, Alberta, is a visitor with his parents this week.

The Misses Maisie and Dorothy Sinclair visited in Calgary over the weekend.

K. Roy McLean, eyesight specialist, 210 Southam Building, Calgary, will be at the Rosebud Hotel on Monday morning, December 6. (tw)

Miss Freda Smith, of Calgary, and Mrs. John Krueger were weekend visitors with Mr. and Mrs. Andrew Peck.

Mrs. J. R. Stevens left on Tuesday for Oakland, California, where she will spend several weeks with her parents.

George Royds who had been relieving at the Jenkins' grocery at Lacombe for the past few months, returned home on Sunday.

Mr. William Ahlgrim who had been in the Didsbury hospital for the past three weeks, returned to his home on Tuesday.

Mr. Alvin Hunsperger is buying stock for Mr. Mose Good during the latter's illness. He went to Calgary with a car of stock on Wednesday.

Mrs. G. A. Nixon, of Edmonton, and Mrs. Jack Ford and daughter Jacqueline, of Calgary, were visitors for a few days this week with Dr. and Mrs. J. L. Clarke.

Buy your C.C.M. skating outfits from T. E. Scott. \$2.50 up.

Mrs. Fred Imm of Emporia, Kansas, and Mrs. Lyle Buckley of Topeka, Kansas, attended the funeral here on Tuesday of their son and brother, the late W. F. Imm.

H. L. Taggart, of Olds, was appointed delegate for this district to the convention of the Alberta Wheat Pool to be held in Calgary next week.

Dr. Clarke, Mrs. Clarke and Bruce attended the University dramatic night at Edmonton last Friday. Miss Lorna Clarke had a part in one of the plays.

Emil Krebs who lives alone in the south-west point of town suffered a stroke just outside his house last Thursday. Fortunately he was discovered by Mr. Cecil Malloch. He now in the Didsbury Hospital.

Mrs. Charles Brown attended the Alberta Oldtimers' reunion in Calgary on Tuesday. Mrs. Brown came to Alberta in 1899 and lived at Cochrane and has been a member of the association since its inception.

The annual meeting of the Community Hall school fair will be held next Wednesday, December 1st, in the Community Hall at 2 p.m. The officers hope there will be a good attendance. If you are satisfied with the officers of the fair, come out and show your appreciation. If not come out and change them.

Jimmy Coates had the misfortune to fall down a well he was digging on his farm at Big Prairie. Jimmy was alone at the time, but fortunately was able to climb the rope. He was brought to town and it was found that he had fractured a bone in his foot.

The Knox Players were entertained at the home of Mrs. G. A. Wallace last Friday evening. A very enjoyable time was had playing bridge and visiting. Those present besides the hostess and host were Mr. and Mrs. Ward Wyman, Mrs. Edwards, Miss Dorothy Ranton, Miss Parrott, Al Thomas and Dave Jenkins.

The programs at the Opera House which would have been bought, had they been turned in were numbers 347 and 286. As these were not purchased we will pay \$750 for the program number selected on Friday and \$1.00 for that selected on Saturday, when "Another Dawn" will be shown. Programs for December will be handed out this Friday and Saturday.

Buy your sweaters, windbreakers and winter shirts from T. E. Scott

## LOCAL & GENERAL

A. E. Shelton, of Kirriemuir, Alta. unloaded a carload of effects last Wednesday and will settle in the Didsbury district.

The dawn comes up like thunder on the greatest love story in years at the Opera House this Friday and Saturday, "Another Dawn," with Kay Francis and Errol Flynn.

Mr. Frank Moyle gave an interesting talk on the north country at a special meeting of the local branch of the Teachers' Alliance held in Didsbury on Saturday last. Mr. Moyle had a fund of information on mining areas in the north, having been employed during the past three years, both in the mining area and in the transportation system. The teachers were greatly impressed by the lecture.

Do not throw away your old storage battery when you can have it rebuilt or have a new battery put in the old case for little more than half the cost of a new one at the Electrotechnic Shop. 50c to \$1.00 allowed on old batteries. Coyle long-life plates used exclusively. All work guaranteed.

## Knox United Church Notes.

The services next Sunday will be conducted by the pastor at the usual hours. He will continue his series of sermons on the "Lord's Prayer". A cordial invitation is given to all.

We wish to remind our friends of the mid-week study group which meets every Wednesday in the church parlor at 8:15 p.m.

## CARD OF THANKS

We wish to express our thanks and appreciation for all kind expressions of sympathy shown us by our friends during our recent and sad bereavement, also for the beautiful floral tributes.

Mrs. W. F. Imm, Clara and Marjorie,

Mrs. Hulda Imm and family

## Coming Events

November 27th: Evangelical Ladies Aid Annual Bazaar in the Leuzler Block, 3 to 8 p.m.; fancy work, home cooking, candy and special parcels on sale; afternoon tea; supper menu—satisfying to the hungry as well as the particular. Prices reasonable: Tea 20c, supper 25c.

December 1st: Didsbury Band Amateur Night, in the Opera House. Make entries with Mr. Len, Bersehn on or before November 30th.
